

SANHA[®]

NiroSan[®] Copper Press Piping System

NiroSan[™] Series 6000 copper press fittings for copper pipes, according to EN1057, suitable for drinking water and heating installations. SANHA press system fittings are well known for outstanding quality. They are easy to work with and offer the right solution for a wide range of applications, be they residential or office buildings. They come with black moulded sealing rings. The fittings are ideal for combining with our unique PURAPRESS Series 8000, made of completely lead-free copper alloy silicon bronze. All SANHA Series 6000 system press fittings are tested and certified by all relevant national and international certification bodies.

Features

- Pressable with V, M and SA profiles
- Suitable for a very broad range of applications
- Long service life of fittings and EPDM sealing rings
- Inseparable, pressure-formed connection
- WRAS tested and certified
- All fittings are manufactured from high quality copper and are suitable to connect to copper pipes, all as EN1057

Working Temperature:
-30°C to +120°C

Tech Sheet
68233

Maximum Working Pressures:

Water: 16 bar
Flammable Gases: 5 bar
Non-flammable/Toxic Gases: 16 bar
