MASTERS OF MALLEABLE IRON

Malleable iron fittings are the most commonly used pipe fittings in the world, renowned for its durability and mechanical strength.

The fittings are used in a variety of systems including compressed air, water supply, central heating, sprinkler systems and air conditioning, as well as gas and steam systems. They are also used to convey non-aggressive liquids and gases.

Malleable iron fittings provide ring main solutions across various industries including construction, agriculture, mining, automotive and industrial. All fittings are specially coated to provide an anti-corrosive property as standard.

Pages 1338-1348

Pages 1349-1355

Available in a black finish (usually for oil and gas fluid applications) and a galvanised finish (usually for water, air and steam installations).

CRANE

Pages 1370-1376

All galvanised fittings are hot-dip zinc coated prior to machining to provide an electrochemical protection and increases resistance to corrosion.

The most extensive choice of **MALLEABLE IRON** to suit any application & any budget

The choice of fittings is very much dependent on the application, the engineer's preference and budget. With a choice of five brands, large stocks and speedy delivery, there's no need to look any further.

Dual Certified Tubes EN10255 and 10217-1

Universal Steel Mill based in UAE is a major producer of steel tubes across the world. As a major supplier to the world market Universal strives to ensure the products it produces meet the stringent standards of today's markets. To that end they have produced a dual certified tube that can be supplied into the HVAC, Mechanical and Fire Protection industries within the UK.

Certification - all tubes can be supplied with MTC (mill test certificates), certifying that the tubes comply to the relevant standard.

Tubes are available from an extensive stock range:

- Standard full lengths or half randoms
- Threaded and plain ended
- Medium or heavy weight
- Red and galvanised finishes

Technical Specification

- Leak Tightness Test
- Online NDT machines
- Hydro static pressure testing to 50 bar

Chemical Testing

- Complete chemical laboratory at the mill
- Elco meters
- Hydrometers

Galvanising

- Hot dipped galvanising/zinc coating to EN10240 quality A.1
- Quality checked hourly with Elco meters to ensure a 55-70 micron thickness across tube length

Material

- Fully killed steel
- Tensile tested
- Internal weld seam shall not have a height exceeding 60% of the wall thickness

6.4 metre lengths are available on 2-5 working day delivery service. Specified delivery dates and times cannot be guaranteed. Additional carriage charges may apply, based on weight and location. Please speak to our Business Development Team for full details.

Please note: The UK market has moved away from black tube and has been replaced by primed red oxide tube.

FLEXIBLE RUBBER BELLOWS

Moulded Rubber Bellows are designed to compensate for misalignment, neutralise movement and reduce noise through vibration in pipelines. They effectively dampen the transmission of sound and vibration and can be used in many applications with various medias including water, oils, chemicals and gases when the correct body material is specified.

Other body materials available on request:

- Butyl
- Nitrile
- Hypalon

Working Temperature:
-30°C to +110°C

Maximum Working Pressure: 16 bar

Other flange drillings are also available on request.

THE SWIVEL RANGE

The swivel range is constructed using female and male parts. 173F is common to all combinations. Lugs on fittings sizes 1 to 5 have the same dimensions, and sizes can be mixed if required, ie: 173F-1 with 173M-4. In addition to being used with 173F to make the combination, all 'M' fittings can also be used to secure various types of infill in place.

WARNING: An entire structure should not be built just using swivel fittings.

Manufactured to BS EN 1562 1997
