

FULL-KIT

Pellet Launcher Kit

Benefits

The AIR-MATE pellet launcher uses compressed air to fire a foam pellet through hose, pipe or tube clearing soft deposits and loose debris as it travels through.

Pellets used in the AIR-MATE system will travel through 90 degree angles, "T" joints, coils, "U" tubes, bore and straight-through valves.

The Hose Nozzle fits over the tube, hose or pipe to be cleaned.

The pellet Launcher is designed to operate at 80 – 110 psi and should be connected by a 3/8 (10mm) ID air line to an air source NOT exceeding 150 psi.

Contents

Description

AM-2 Hand Piece:	x 1
AM-2 50mm Head:	x 1 (Includes Reducer Ring)
White Hose Nozzles:	10pcs-----6mm-50mm
